# Installation Instructions
## Magento Color Swatch Extension

# Overview

This tutorial document describes the basic requirements of Magento Color Swatch extension and offers a step by step guide for installing and configuring the Magento Color Swatch extension on a Magento website. Step by step guide covers the process of creating a configurable product in Magento administration and configuring the Magneto Color Swatch extension options needed for extension to enhance the configurable product in question.
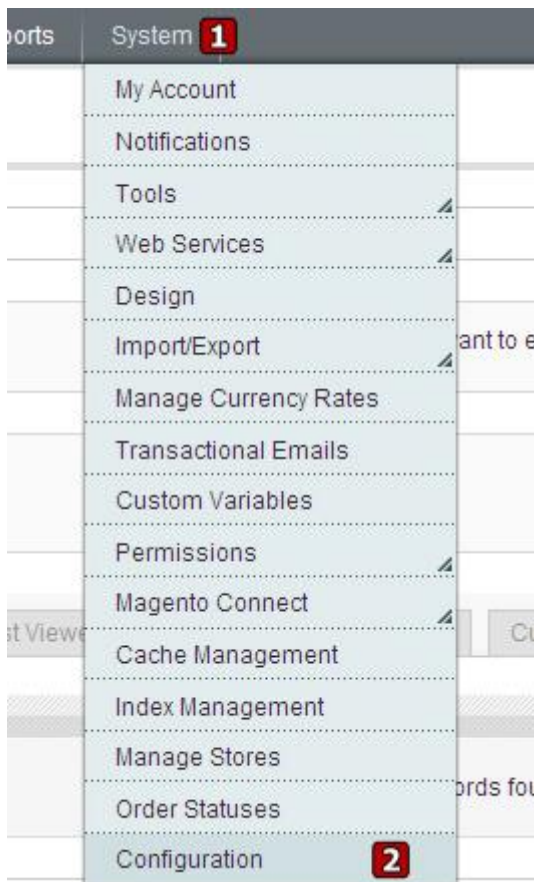

# Requirements

Magento Color Swatch extension is encoded via ionCube ( http://www.ioncube.com/ ). In order to run the Magento Color Swatch extension, you must have ionCube loader ( http://www.ioncube.com/loaders.php ) installed on your web server. For more information about the ionCube loaders, please visit their website or contact your webmaster.

# Installation

The installation process consists of extracting the plug-in files from the archive somewhere on your local computer or web server (in most cases, we will send you a ColorSwatch.zip file that contains the extension files in the needed folder structure) and copying them to the root folder of your magento website.

By default the Color Swatch extension is installed in the Magento's default package and theme ( /default/default/ ). If you are using a custom package and/or theme on your Magento website, you will have to copy the color swatch files to appropriate folders in your package / theme folder structure.

Once you copy the files, new areas should be available in your Magento administration.

| orts | System **1** |
|---|---|
| | My Account |
| | Notifications |
| | Tools |
| | Web Services |
| | Design |
| | Import/Export |
| | Manage Currency Rates |

| | Custom Variables |
| | Permissions |
| | Magento Connect |
| | Cache Management |
| | Index Management |
| | Manage Stores |
| | Order Statuses |
| | Configuration **2** |

Go to System (1) >> Configuration (2) page, and you'll see the "SMDesign ColorSwatch(3)" option available, just under the Catalog section in the menu on the left. By opening that section you can now access the settings page for Magento
Color Swatch extension(4).

There's a new area available in your Magento administration once you've successfully installed Magento Color Swatch extension.

Go to Catalog (1) >> SMD ColorSwatch (2) to access the "Swatches" page. On this page you'll be able to upload the swatch images for each of your attribute (3)(4)(5)options.

If you installed the extension in a new Magento installation that has no products but only default attributes, you'll notice that you don't have any attribute options available on the "Swatches" page to assign swatch images to. That's ok, you'll just have to create attributes that you want to use on your Magento website, and assign attribute options to them.

If you installed the extension on a Magento system that already has products and attributes and attribute sets, chances are you'll see quite a few attributes on the "Swatches" page where you'll be able to assign swatch images to each of those attribute options.

( Please note that only attributes that are used for creating Magento's Configurable products will be shown on "Swatches" page, since the Magento Color Swatch extension only works with Magento's Configurable products.)

# Creating Attribute

Go to Catalog (1) >> Manage Attributes (2) page, then click on the Add New Attribute (3) button.

Once on the New Product Attribute page, enter the code for your attribute (2), set the Catalog Input Type for Store Owner to Dropdown (3), set Apply To : All Product Types (4) ( alternatively you can set the Apply To option to Configurable product ) and set the Use to Create Configurable to Yes (5).

Once you've entered all the necessary values click Save and Continue Edit button in the upper right corner, or change the tab by clicking on the Manage Labels/ Options tab.

On the Manage Labels/Options tab page, enter the Title for the attribute(1), and enter all the attribute options (2) ( values ) that you want your configurable product(s) to have. Once done, save the attribute.

To effectively use attribute, it's best to add it to the attribute set. If not, you can't assign the attribute to a configurable product.

# Assigning Swatch Images to Attribute Options

You can perform this step right after creating attribute options/values, or after you've created the configurable product.

Go to Catalog (1) >> SMD ColorSwatch (2) to access the "Swatches" page. You should be able to see all the options/values for each of the attributes that have them. Next to the name of each option/value, you'll see a browse button (1) and a title label (2). Click browse button (1) to upload swatch image for each option/value.

Optionally you can enter labels for each option/value in the label box (2).

Once you've selected the swatch images from your local computer, click on the save button in the upper right corner.

Enable Color Swatches for this attribute ☑      Allow attribute to change main image ☑
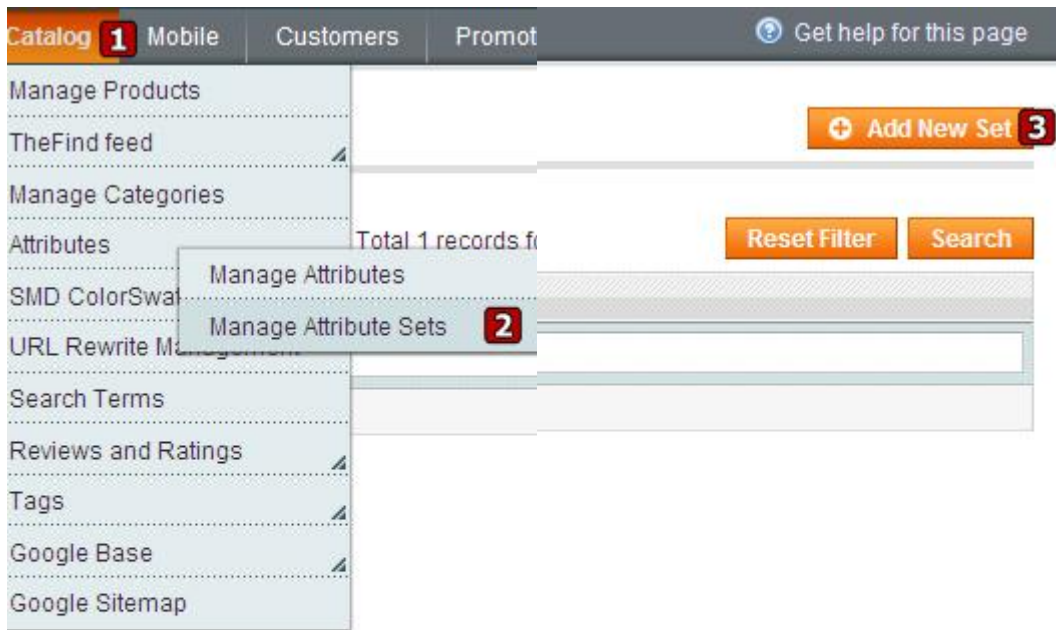

**Swatch image - settings**                                      ADVANCED SE

| Name | | Upload Image | Preview | Delete |
|------|------|------|------|------|
| red | | Browse | | ☐ |
| green | | Browse | | ☐ |
| navy | | Browse | | ☐ |
| yellow | | Browse | | ☐ |

You can use #{image} which will be replaced with swatch image

Once you've done this, you should be able to see the swatch images assigned to each of the options/values of the attribute.

# Creating Attribute Set

Go to Catalog (1) >> Manage Attribute Sets (2) then click the Add New Set button (3).

Enter the name of the new attribute set (1) and save the new attribute set.

## Groups

**⊕ Add New**    **⊗ Delete Selected Group**

Double click on a group to rename it

If you want Magento Color Swatch extension to change the main image of your product once swatch options are clicked on the public side of the website, you should upload images to each of the simple product that represent attribute options/values, by clicking on the Edit (1) link next to each of the simple products.

| Image | Label | Sort Order | Base Image | Small Image | Thumbnail | Exc |
|---|---|---|---|---|---|---|
| No image | | | ○ | ○ | ● | |
| *(image)* | | 1 | ○ | ○ | ○ | |
| *(image)* | | 2 | ○ | ○ | ○ | |
| *(image)* | | 3 | ● **1** | ● | ○ | |

In the pop up window that will appear, click on the Images tab and then upload images for this attribute option/value. Please be sure to click the radio button to mark the main image next to the image you want to be presented as the main image for that attribute options/value. All the other images that you uploaded to this simple product will appear in the more views part of the public page.

Do this step for each of the simple products.

# Advanced Options

Color Swatch options described here are available in Magento administration System >> Configuration >> SMDesign ColorSwatch.

1. General Box – Option : Enable ColorSwatch

Change the dropdown (1) to Yes/No to enable/disable ColorSwatch extension.

When disabled, you'll see the default Magento select box on your product page.

2. General Box – Option: Show Magento configurable option block

Use select box to set the option to Yes/No (1). If set it to Yes, default Magento select box will be shown in addition to color swatches.

3. General Box – Option: Swatch image width / Swatch image height

Set the Swatch image width (1) and Swatch image height (2) in pixels.

# Product List Swatches

If your Color Swatch package includes Product List swatches, you'll have the option to show color swatches on your category product list pages in both grid and view mode.

To enable product list swatches, please go to System >> Configuration, then click on the SMD Color Swatch from the left menu.

Once the page loads, open the Product List Settings box:

Set Enable Swatch on product list/grid page to Yes, and enter the number of swatches that you'd like to appear.

Once that's done, save your configuration. Now all you need to do is to select which products you'd like to have this option on product listings page.

Go to edit the product that you wish to have product list swatches on the product list page, and on the Color Swatch tab you'll see the option: Show attribute on Product list page. Set it to Yes.

# More Information

For more information regarding the product, please visit our website www.magentocolorswatch.com
